DURABLE · AFFORDABLE · GREEN

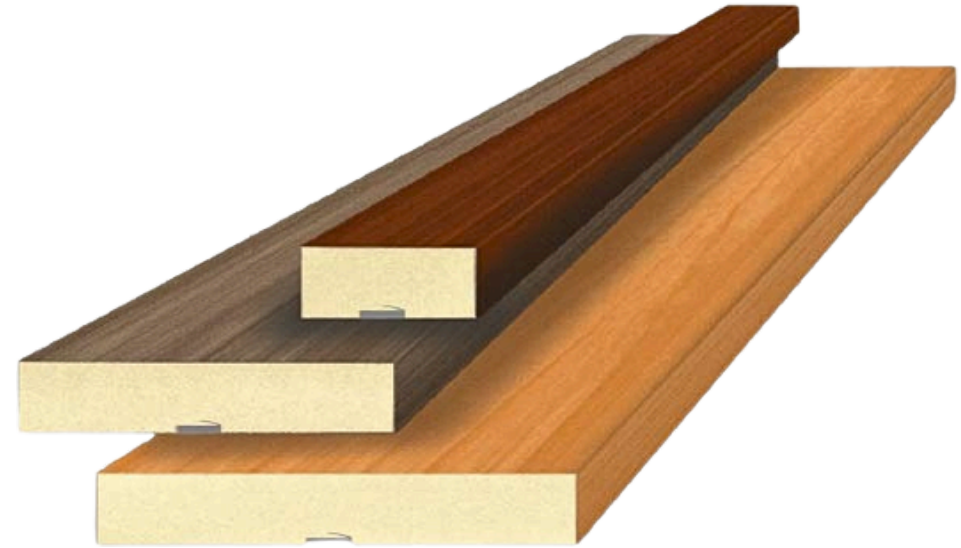

PrimeAlux

PrimeAlux specializes in the design and manufacture of variety of aluminum solutions to enhance the aesthetics of your property and make it more attractive. In addition to being green and environment-friendly, our solutions are super durable and withstand severe weather conditions. Our systems are engineered to last for years, making them the best value.

Iconic Slats

PrimeAlux Offers a premium modular Architectural systems combining elegant design, high quality, and value. Our Iconic insert slats are made of pre-painted aluminum coils with PU foam core providing superior flatness and strength while maintaining light weight.

Durable

Our aluminum solutions are strong and durable due to the use of the highest quality raw material and manufacturing processes, which prevents any kind of corrosion, delamination, paint peeling, cracking, or chipping.

Affordable

Our ready to assemble solutions can help our customers to save installation time and money. Thanks to our iconic, well engineered designs, our solutions require zero maintenance. Therefore, significantly reduces long-term investment cost.

Green

Our solutions are made from green aluminum with up to 40% recycled content. The manufacturing operation is highly sustainable, with 50% of the energy used in our manufacturing process generated from solar energy. Our products are eco-friendly, recyclable, and lightweight.

Key Features

PrimeAlux offers a ready-to-assemble, easy-to-install fencing system designed to enhance the value of your property. Our rich, vibrant colors and durable textures are crafted to maintain their appearance for years, requiring minimal maintenance while remaining resistant to insects, stains, and mold.

With a diverse range of designs and configurations, PrimeFence seamlessly complements and elevates your outdoor architecture.

Installation Methods

PrimeAlux systems can be installed either underground or on ground, making them suitable for a wide range of applications and environments.

Wind Load Test

Wind load tests on aluminum fencing helps ensure that the fence can withstand strong winds and harsh weather conditions without being damaged or uprooted.

- Structural Integrity
- Safety assurances
- Durability
- Code Compliance
- Customer Confidence

Wind Load Test

Two Rail Privacy Horizontal Fence 6'x6'

The 6' x 6' Privacy Fence Panel has undergone wind load laboratory testing and demonstrated its strength by withstanding a force of 500 kilograms-force (Kgf). This performance equates to a wind resistance of up to 171.4 kilometers per hour (Km/h), indicating the panel's robustness and durability in severe weather conditions, aligning with our commitment to quality and safety.

Results

500 Kgf	171.4Km/h
---------	-----------

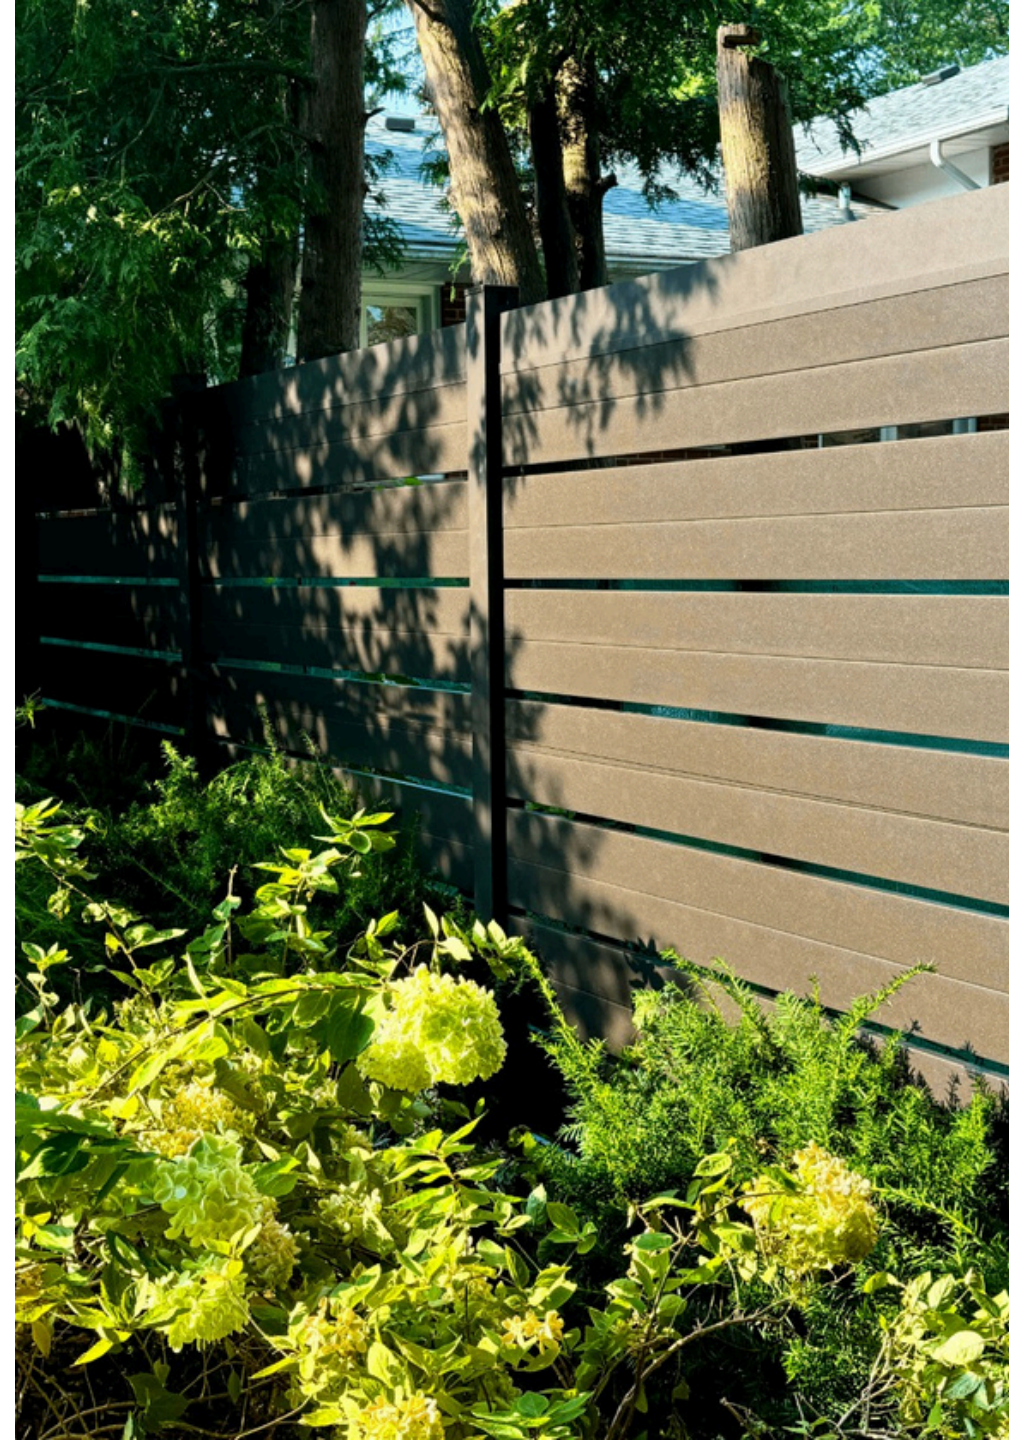

Experiment #	Accumulative Applied Force (kgf)	Equivalent Wind Velocity (km/h)	Deflection (mm)
1	141	91.0	5
2	260	123.6	12
3	301	132.9	18
4	366	146.6	23
5	413	155.7	29
6	453	163.1	34
7	473	166.7	39

Environmental impact

PrimeAlux products are made from green aluminum with 40% recycled content. The manufacturing operation is highly sustainable, with 50% of the energy used in our manufacturing process generated from solar energy. Our products are eco-friendly & recyclable.

PrimeAlux Comparative Competitive Analysis

	Material	Weight Installation Complexity	Colors/Coatings Warranty	Price Comparison	Environmental Impact
PrimeAlux	PU foam core aluminum (lightweight, durable)	Lightweight with slide-in system, easy and fast to install	Wide range of colors, including realistic wood-like textures, premium coating, & long warranty	Affordable mid-end market	Eco-friendly; recyclable aluminum, produced with 50% solar power, 40% recycled content
Extruded Aluminum	Solid extruded aluminum (heavy, very durable)	Heavy, requires more handling effort & time	Various colors, but limited in textures. Certain colors may have long lead times	Premium high-end market	Recyclable aluminum, though wood effect by heat sublimation generates plastic film that is not easily recyclable.
Vinyl	Polyvinyl Chloride (PVC, lightweight but less impact-resistant)	Lightweight, easy to install	Several colors but less realistic (Artificial) looking	Affordable mid-end market	None biodegradable & recyclable; Production process involves the release of harmful chemicals, including dioxins
WPC (Composite)	Wood-Plastic Composite (WPC, dense and durable)	Heavier, more handling demand requires strong support and takes longer to install	Multiple natural colors; mimics wood textures well but fewer custom options, but less realistic (Artificial) looking	Mid to High end market	Although it contains wood fibers, which are organic, the plastic components—typically PVC, polyethylene, or polypropylene—are not biodegradable.
